# ILAN DASCHER

Brooklyn, NY | 929-422-1771 | ilan.dascher@stonybrook.edu | www.linkedin.com/in/ilan-dascher

## EDUCATION

**Stony Brook University** **Stony Brook, NY**
*Major: B.S. in Applied Mathematics and Statistics* *Expected: May 2029*
*Intended Second Major: B.S. in Computer Science*
Relevant Coursework: Introduction to Object-Oriented Programming, Foundations of Computer Science, Calculus II, Calculus III, Calculus IV, Introduction to Linear Algebra, Engineering Computing and Problem Solving

## EXPERIENCE

**Stony Brook University** **Stony Brook, NY**
*Readiness Technician* *August 2026 - Present*

- Perform preventative checks on classroom computers, projectors, audiovisual systems, and other instructional technology to ensure learning spaces are ready for daily use
- Identify and troubleshoot minor technical issues and report equipment problems for timely follow-up and resolution
- Document completed inspections, maintenance activities, and technical issues through detailed written reports to supervisors
- Maintain and organize classroom technology and teaching areas to support reliable daily operation for faculty and students

**Consolidated Edison, Inc.** **New York, NY**
*Engineer Aide* *June 2024 - August 2025*

- Researched, analyzed, reported, and improved distributed energy resources (DER) data to support engineering teams in evaluating current and potential energy infrastructure sites
- Utilized ArcFM GIS mapping software to analyze geographic locations, site characteristics, and infrastructure capacity for renewable and distributed energy systems
- Developed a centralized digital documentation system to help engineers track project updates, store technical notes, and improve internal collaboration
- Implemented a Python script to automate data comparison across systems, reducing manual verification time for engineers

## SKILLS

- **Programming**: C++, Python, MATLAB
- **Tools**: Microsoft Suite, Google Workspace, Arduino IDE, Multisim, Fusion 360, ArcFM GIS
- **Languages**: Russian (fluent), French (beginner)
- **Certificates**: NOCTI Mechatronic-Level 1, Autodesk Certified User, Design and Drafting for Production (PLTW), Digital Electronics (PLTW), Computer Integrated Manufacturing (PLTW)

## PROJECTS

**Robotic Candy Dispenser**
*Team Member*

- Programmed an Arduino-based control system to coordinate servo movement, object detection, and candy dispensing
- Integrated PixyCam computer vision to identify colors and trigger the appropriate dispensing response
- Collaborated with teammates to test, troubleshoot, and refine the automated system
- Designed a chute-and-linkage mechanism to convert sensor input into controlled physical motion

**Dynamic System Simulation & Parameter Estimation - MATLAB Project**

- Developed a MATLAB simulation of a three-mass dynamic system using Forward Euler numerical integration
- Estimated unknown physical parameters from noisy measurement data using mean squared error and iterative parameter searches
- Analyzed and visualized displacement, velocity, system constraints, and damping behavior across simulated time-series data

**Future Engineers - Weather Balloon Challenge**
*Finalist*

- Designed and constructed a weather balloon payload capable of withstanding an eight-foot drop test
- Engineered the payload using recycled materials and lightweight components to meet competition design constraints
- Analyzed 20 years of Los Angeles climate data to guide design decisions, creating data visualizations and technical documentation to support design justification
